

## Installation and Configuration: Virex 7

(**Note:** This version of Virex is for Mac OS 10.2 and above **ONLY.**)

Virex is an anti-virus program written for Mac OS X to clean and protect your computer from viruses.

### DOWNLOAD

Open a web browser such as Internet Explorer or Safari and type in the location window or click the link below:

<http://its.union.edu/services/software.htm>

The URL will place you at a window with various downloadable software. Click on **Virex7.2.dmg**. The Virex 7.2 installation file will be saved on your desktop.

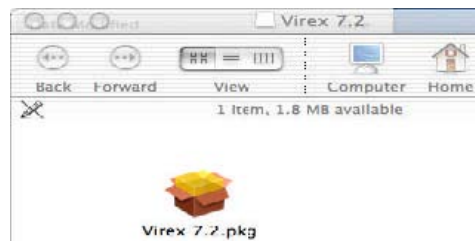

Downloading is complete. Please go to the Installation portion of this document.

### INSTALLATION

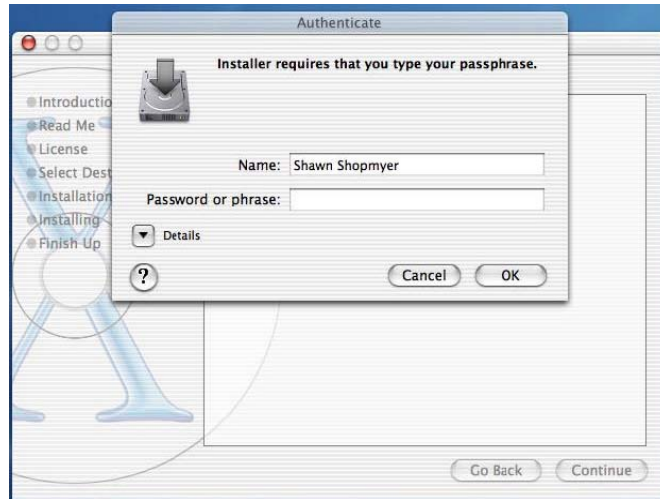

1. Double click the **Virex 7.2.dmg** icon shown below. This will extract the setup files into the **Virex 7.2** folder.

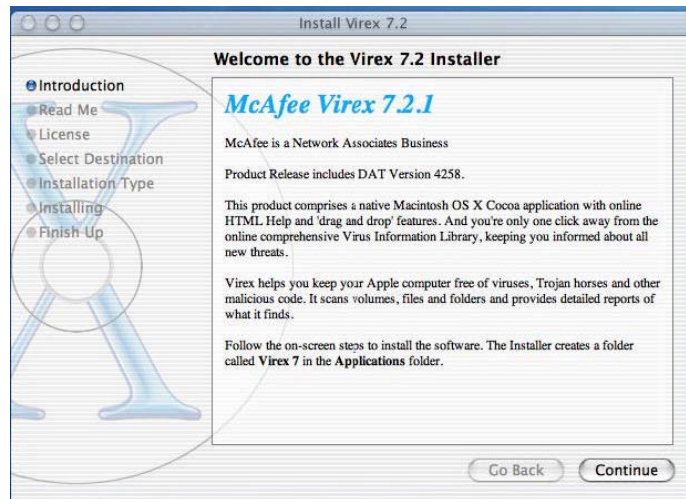

2. Double click the **Virex 7** folder. Once the folder is open double click on the **Virex7.2.pkg** icon as shown below. This will begin the installation process.

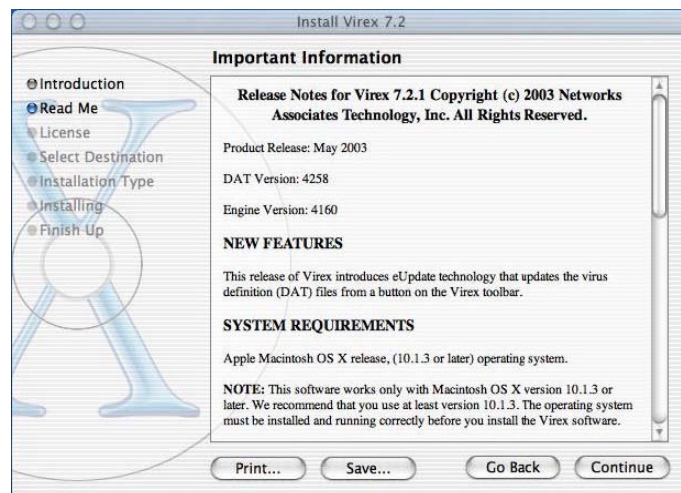

3. Once you begin the setup process you will see a window similar to the one below-enter your username and password and then click **OK** to continue.

4. Click **Continue** on the following window.

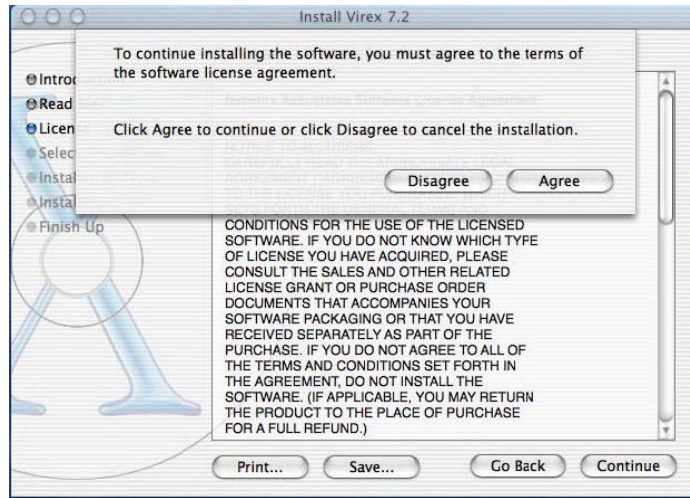

4. Click **Continue** on the following window.

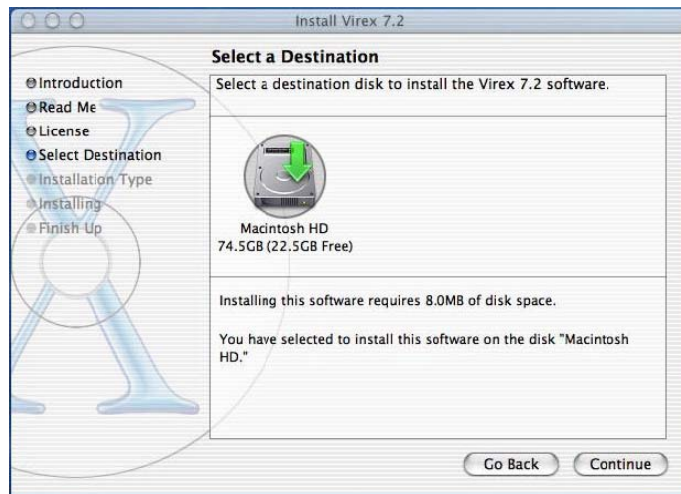

5. Read the license agreement and then click **Continue**. Once you have clicked **Continue** a popup window will appear, as shown below, asking you to agree to the license agreement. If you have

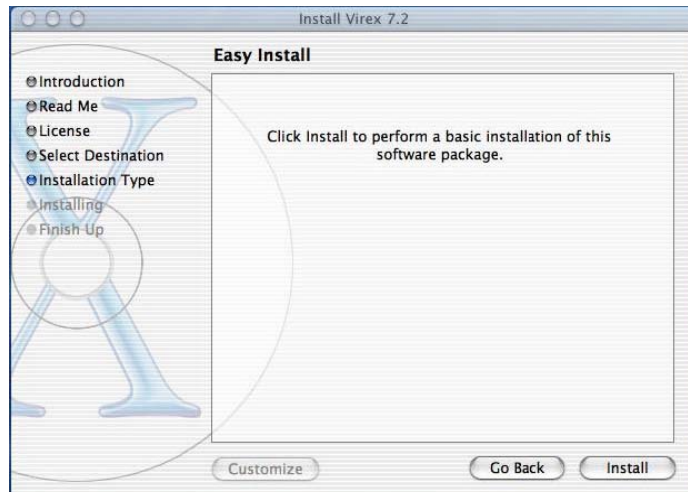

read and agree to the license terms, click **Agree**.

- You will now be asked to select a destination for Virex. Select the **Macintosh HD** as shown below and click **Continue**.

- Click **Install** on the following window to proceed.

8. You will be shown a window with a progress indicator similar to the one below as the application installs. When the installation is complete, click the **Close** button. You have successfully installed Virex 7.2
